SUMMARY

Distinguished/Principal-level engineer with 25+ years building horizontally scalable systems at Netflix, American Express, Yahoo!, BILL, and Walgreens. Track record of taking on the hardest infrastructure problems—cloud migrations, security architecture, performance, and large-scale data movement—and shipping. Comfortable operating from one-on-one mentorship to driving organization-wide technical strategy. Looking for a Staff/Principal/Distinguished IC role where precision and correctness matter.

CORE SKILLS

Languages: Java, Python, ANSI C, Perl, Scheme

Cloud & Infrastructure: AWS (EC2, S3, and broader services), Linux systems & networking, distributed systems design

Data: SQL/relational databases, NoSQL (Cassandra, DynamoDB, MongoDB), Hadoop, Spark, large-scale data migration

APIs & Services: REST and gRPC API design, microservice architecture, event-driven systems

Operations: Observability (Prometheus, Grafana, Datadog, Graphite), incident response, disaster recovery, BCP

AI / LLM: LLM integration (OpenAI, Anthropic), prompt engineering, agentic systems

EXPERIENCE

Walgreen Co. — Senior Director, Software Engineering

Oct 2024 – Apr 2026

Remote | Promoted from Security Engineering into Pharmacy Technology to lead chain-wide inventory work

- **Senior Director, Pharmacy Technology (Jul 2025 – Apr 2026):** Led technical direction for RxI, Walgreens' chain-wide inventory system. Modeled requirements for chain-wide auditing of CII (CSA Schedule 2) drugs at scale: 5.8M products, 37,500+ handheld scanners, 8,000+ stores, all within a 24-hour window.
- **Senior Director, Security Engineering (Oct 2024 – Jul 2025):** Drove the redesign of Walgreens' network edge from traditional VPN to a Secure Edge / SASE Zero Trust Network Architecture. Evaluated vendor offerings and led the organization through selection, navigating technical, financial, process, and cultural trade-offs.

BILL — Distinguished Engineer, Infrastructure

Jan 2023 – Oct 2024

San Jose, CA

- Took a leadership role in migrating BILL infrastructure from on-prem to AWS, partnering across SRE, SAE, and application teams.
- Led migration of hundreds of terabytes of documents from NFS-mounted storage to S3, coordinating across application and infrastructure teams.
- Assisted SRE and SAE during incidents; improved deployment infrastructure; contributed to Disaster Recovery and Business Continuity Process design.
- Mentored engineers with a focus on measurement, frequently using the Socratic method.

Cirrus Software LLC — Principal Engineer (Consulting)

Mar 2016 – Present

Santa Cruz, CA | Independent practice

- Help clients across software design, implementation, cloud migration, DevOps, and complex problem-solving engagements.
- **Notable engagement — Cigna (via PROUnlimited), Jan 2021 – May 2022:** Application Development Principal. Addressed long-standing technical debt by migrating mainframe VSAM legacy plan-file data to DCRS.

American Express — Distinguished Engineer, VP Technologies

Apr 2014 – Feb 2016

Enterprise Growth Division, New York, NY

- Introduced cloud computing to Serve (OpenStack, Asgard, bakery pattern) and brought operational transparency through Graphite.

- Helped transform Amex's Foreign Exchange platform from waterfall to agile delivery.
- Introduced microservice architecture: implemented a configuration service and provided REST resource modeling guidance.
- Consolidated 13 Subversion repositories spanning 8+ years and 90,000+ revisions into a single repository.
- Forwarded Amex's open-source contribution model; moved Serve OLTP data into Hadoop and authored Map/Reduce jobs to unlock BI use cases.

Netflix — Senior Software Engineer

Dec 2010 – Apr 2014

Los Gatos, CA

- Helped transform new-user acquisition from USA/English-only to international: Canada, Latin America, EU, Nordics, UK, Netherlands, plus groundwork for additional regions.
- Reconstructed datacenter-based back-end systems to run on AWS (EC2, S3, etc.) as part of Netflix's cloud migration.
- Designed and built **Grapevine**, an event-based publishing system on S3 + ZooKeeper, replacing an expensive polling implementation. Reduced average movie-metadata propagation latency from 30 minutes to sub-second; powered metadata distribution for the first two years of Netflix Originals.
- Member of the cross-functional "Cloud Performance: Special Ops" working group.
- Implemented and open-sourced **gcviz**, a Java Garbage Collection visualizer (github.com/Netflix/gcviz).

Yahoo! — Principal Architect

Jul 2008 – Dec 2010

Sunnyvale, CA

- Identified and resolved performance issues in the Yahoo! Updates platform, which published user events across the Yahoo! Network.
- Designed a globally distributed secure store for OAuth 1.0a, OAuth 2.0, FB Connect, and other third-party authorization tokens; co-led implementation.
- Migrated the Y!OS team from CVS and Perforce to Subversion: 12+ years of history, 8+ GB of source, 70,000+ revisions.
- Used Hadoop to analyze Yahoo! Address Book (~9 TB) and underlying social-feature data sources (~14 TB); contributed back to the Hadoop project.
- Managed the MyBlogLog team through the departure of its final founder.

EARLIER EXPERIENCE

- **Silver Spring Networks**, Founding Software Engineer (2003–2004) — architected a utility networking back-office system communicating with up to 10,000 gateways, each aggregating up to 1,000 gas/water/electric meters.
- **VMware**, Senior Member of Technical Staff (2007–2008) — reduced engineering build times and resolved long-standing build infrastructure issues.
- **Sputnik**, Senior Software Engineer (2007); **Cisco** (via Ultimate Technology), Consultant (2004–2006); **Feder8.com**, Co-Founder & CIO (2006–2007).
- **Earlier roles**: Senior Software Engineer at NetVMG (2001–2002) and Epinions.com (2000–2001); Software Design Engineer at HP on the HotSpot JVM for PA-RISC/HP-UX (1999–2000); independent consulting (2002–2003); Graduate TA/RA at the University of Kansas (1996–1998).

SELECTED OPEN-SOURCE & PROJECTS

- **gcviz** — Java Garbage Collection visualizer, open-sourced via Netflix (github.com/Netflix/gcviz).
- **Compilers & VMs** — DEC Alpha Scheme compiler written in Scheme; JVM written in Scheme; ANSI-C utility library (libmooreb); generic server framework (arcs).
- **Additional projects**: github.com/mooreb

EDUCATION & HONORS

University of Kansas — M.S. Computer Science (with Honors); B.S. Mathematics

1991 – 1998

National Merit Scholar • Kansas Scholar • Eagle Scout • Tech Museum "Tech Challenge" judge (2008–2012)
